

MAG AA Automatic Air Assisted Airless Spray Gun

A54-71R-2 12/11

High transfer efficiency in a manifold mounted air assisted airless HVLP compliant spray gun

Time and Material Savings Benefits

The unique Binks air assisted airless tip and air cap design is now available in a new manifold automatic gun platform. The two-piece design is ideally suited for multi-gun finishing equipment such as rotary machines, reciprocators, or fixed chain-on-edge systems located in high production environments. Fluid and air connections, as well as a patented in-line filter design are located in the manifold, providing quick and easy removal of the gun for periodic maintenance. In addition to the highly transfer efficient Binks AA spray technology, the Binks MAG AA Automatic features time and material saving advantages including:

- Integrated in-line fluid filter (patented) – no need to remove the gun body when changing filters

- Reduced chance of color contamination.
- Solvent resistant high grade piston o-rings for longer life.
- Modular design for quick and easy replacement
- Cross platform design characteristics with low pressure HVLP model
- Easily mounts to other gun base configurations
- Component cartridge design for quick and easy repairs
- Superior transfer efficiency
- Reduced overspray
- Lower booth maintenance costs
- Reduced bounceback
- Longer wear part service life

Typical applications include wood finishing, leather tanning, metal furniture and fixture manufacturing, fabricated metal manufacturing, and recreational products.
